

ASX ANNOUNCEMENT

28 April 2026

QUARTERLY ACTIVITIES REPORT

FOR THE QUARTER ENDED 31 MARCH 2026

Halvorsen Resources Ltd (ASX: HVR, FRA: 3HV) (**Halvorsen** or **the Company**) is pleased to report on its activities undertaken during the March 2026 quarter.

Highlights

Chilombo Copper Project (Chilombo), Zambia

Updated Chilombo Mineral Resource Estimate Delivers Significant Resource Expansion

- Updated Indicated and Inferred Mineral Resource estimate (MRE) delivered a 57% increase in tonnage (143 Mt at 0.49% Cu, 0.54% CuEq) and a 44% increase in contained copper (696 kt, 0.2% Cu cut-off) compared to the March 2025 MRE.
- **Tier-1 Grade Comparison:** Copper grades now compare directly with world-class operating mines in the Zambian Copperbelt, further enhanced by a 0.54% CuEq poly-metallic grade.
- **High Geological Confidence:** Over 41% of the resource now sits in the Indicated category, providing a robust foundation for near-term development studies.
- **Latent Value Unlocked:** Inclusion of maiden Indicated and Inferred gold and cobalt resources provides substantial potential by-product credits.

Widespread gold identified at Lwele Central

- Significant by-product gold mineralisation confirmed from re-assaying of existing drill samples at Lwele Central.
- Highly anomalous gold intersected in 49 of 58 holes re-tested to date (30 announced after the end of the March quarter) from samples sourced from oxide, transitional and fresh mineralised zones.
- Notable results to date include:
 - 26.6m @ 0.62 g/t Au from 95.4m (LWDD062)
 - 18.9m @ 0.18 g/t Au from 52.3m (LCRD008)
 - 30.7m @ 0.20 g/t Au and 0.99% Cu from 191m (LCMT002)
 - 12.2m @ 0.23 g/t Au and 0.54% Cu from 52.9m (LCRD021)
 - 6.8m @ 0.51 g/t Au and 0.52% Cu from 198m (LCRD005)
 - 4.31m @ 0.58 g/t Au and 0.43% Cu from 82.2m (LCDD011)
- Gold results from a further 22 re-assayed holes are expected in late April.
- All new gold results will be incorporated into an update of the current Indicated and Inferred MRE for Lwele Central, expected during Q2 2026.

Increased ownership of the Chilombo Copper Project

- Halvorsen acquired an additional 7.5% interest in Chilombo for US\$5.1 million, increasing its ownership stake to 87.5%.

Shallow copper sulphide footprint grows at West Kasakula

- Assay results received from the diamond drilling programme completed at West Kasakula define continuous near-surface copper sulphide mineralisation over more than 900m of strike, remaining open to the west and south.
- Significant new intersections from this drilling include:
 - 8.4m @ 0.93% Cu from 51.8m, incl. 6.6m @ 1.11% Cu from 51.8m (KWDD004)
 - 6.3m @ 0.66% Cu from 80.5m, incl. 3.9m @ 0.87% Cu from 82.9m (KWDD009)
 - 5.5m @ 0.42% Cu from 137.0m (KWDD001)
 - 4.9m @ 0.56% Cu from 82.7m, incl. 2.6m @ 0.93% Cu from 84.9m (KWDD002)
- Soil sampling has outlined strong copper anomalism extending approximately 1.2km south of existing drilling, supporting potential for further mineralised strike extensions.

Corporate

- Successfully raised approximately A\$36 million in new proceeds through an equity placement strongly supported by existing and new high-quality institutional investors.
- Halvorsen is well funded to accelerate exploration and advancement of Chilombo, with a cash balance of approximately A\$25.3 million (A\$29.3 million including A\$4m held in a 12-month term deposit) and zero debt as at 31 March 2026.

Halvorsen Managing Director and CEO, Daniel Whitcombe, said:

“The March quarter was a period of real momentum at Chilombo. The resource upgrade has lifted contained copper by 44% to roughly 696kt and added materially to our Indicated inventory. That result is a direct return on the Phase 2 drilling and exploration work, and it strengthens our view that Chilombo is a large copper system that shares many features with the major operations of the Zambian Copperbelt.

“Adding cobalt and gold as by-products gives the project another potential source of value. The re-logging and re-assaying of historical core keeps showing that gold at Lwele Central is broader and more consistent than we first thought. Gold credits of this kind could improve the overall economics and help lower the cost base of any future mining and processing operation at Chilombo.

“Over the coming weeks we expect to fold the outstanding gold results into an updated Lwele Central MRE. At the same time, the West Kasakula diamond drilling has produced encouraging results that support a maiden MRE, which is still on schedule for Q2 2026.

“Our Phase 3 programme is the next step. It will focus on systematic regional exploration across a number of high-priority electromagnetic targets that look similar to Lwele Central, among them Mbalango, Sokoshi and Kalwanyembe. With the backing of the recent A\$36 million placement, we are funded to deliver a 42,000m drilling programme over 2026–2027 while also advancing metallurgical testwork and our key technical studies.

“Given the quality of our target pipeline and growing confidence in the size of the Chilombo copper system, we see considerable resource growth and long-term shareholder value still to come.”

Project Development

Chilombo Copper-Cobalt Project (Zambia); 87.5% HVR

The Chilombo Copper Project is Halvorsen's flagship copper development asset, located in the northwest of Zambia within the globally significant Zambian Copperbelt, one of the world's most prolific copper-producing regions.

Halvorsen completed its Phase 2 drilling programme at Chilombo in November 2025, comprising approximately 12,640 metres of diamond drilling across 51 holes (including 6 re-entries) and 2,980 metres of shallow aircore (AC) drilling from 142 holes.

ILLUSTRATIVE FIGURE – FICTIONAL DATA

Figure 1: Chilombo Mining Licences showing deposits and currently delineated prospects

Updated Mineral Resource Estimate for Chilombo

On 17 February 2026, Halvorsen announced an update to the Chilombo MRE. The updated Indicated and Inferred Mineral Resources now total 142.7Mt at an average grade of 0.54% CuEq** across the Lwele Central and Sampamba deposits (using a cut-off grade of 0.2% Cu).

The MRE was completed by Mr Michael Treloar (FAusIMM (CPGeo)), an independent expert and Competent Person as defined in the JORC (2012) Code, who is a full-time consultant with Treloar Resource Geology (Perth, WA).

Following a first-pass investigation of gold distribution through the re-assaying of previous drill holes, Halvorsen also declared maiden gold resources for the Lwele Central deposit, delivering strong potential to enhance the value of Chilombo through substantial by-product revenue. The updated Lwele Central Indicated and Inferred MRE now totals 123.9 Mt @ 0.55% CuEq** (at a 0.2% Cu cut-off grade) for 599,500 tonnes of copper, 25.0kt of cobalt and 115,000 ounces of gold.

Table 1: Chilombo Copper Project Mineral Resource at 0.2% Cu cut-off grade

Deposit	Resource Classification	Tonnes (millions)*	Copper (Cu%)*	Cobalt (Co%)*	Au (g/t)*	Tonnes Contained Cu*	Tonnes Contained Co*	Ounces Contained Au*	Copper (CuEq%)**

* Rounding has been applied

** For the CuEq grade calculation methodology, refer to Appendix 2 of this release

Widespread gold identified at Lwele Central

Following the identification of highly anomalous gold values in metallurgical testwork during 2025, Halvorsen commenced a detailed investigation of gold distribution and grade as a potentially material and valuable by-product to the copper resources currently defined at the deposit¹. This initial work resulted in the declaration of maiden gold resources at Lwele Central under the MRE update of 17 February 2026.

Halvorsen has continued to evaluate this multi-commodity potential, selecting a large number of drill samples from both the Phase 1 and Phase 2 diamond and Reverse Circulation (**RC**) drilling programmes for re-assaying, to determine the distribution of gold (and gold grades) within defined copper mineralisation in the oxide, transitional and fresh zones, as defined by geological logging.

On 21 January 2026, Halvorsen released results from 28 of these re-assayed drill holes, 23 of which contained highly anomalous grades of gold. Significant intersections included:

- **30.7m @ 0.20 g/t Au and 0.99% Cu from 191m (LCMT002)**
- **12.2m @ 0.23 g/t Au and 0.54% Cu from 52.9m (LCRD021)**
- **6.8m @ 0.51 g/t Au and 0.52% Cu from 198m (LCRD005)**
- **4.31m @ 0.58 g/t Au and 0.43% Cu from 82.2m (LCDD011)**
- **39.69m @ 0.06 g/t Au and 0.14% Cu from 260m (LCDD011)**
- **8.52m @ 0.16 g/t Au and 1.80% Cu from 42.9m (LCDD002); and**
- **5.1m @ 0.24 g/t Au and 0.55% Cu from 98.2m (LCMT002)**

After the end of the quarter, on 16 April 2026, Halvorsen released results from a further 30 re-assayed holes, 26 of which contained significant gold content. Significant intercepts included:

- **26.6m @ 0.62 g/t Au from 95.4m (LWDD062)**
- **18.9m @ 0.18 g/t Au from 52.3m (LCRD008)**
- **14.3m @ 0.20 g/t Au from 119m (LWDD056)**
- **2.6m @ 0.76 g/t Au from 156m (LWDD053)**
- **10.2m @ 0.19 g/t Au from 18.2m (LWDD054)**
- **11.8m @ 0.09 g/t Au from 202m (LWDD057)**
- **7.8m @ 0.16 g/t Au from 134m (LWDD052); and**
- **8.9m @ 0.11 g/t Au from 187m (LWDD057)**

Results for a further 22 re-assayed holes remain pending and are expected later in April.

The Company will then incorporate all new gold assay data into a further update of the Lwele Central MRE, expected to be released later in Q2 2026.

Chilombo ownership interest increases to 87.5%

In March 2026, through its wholly-owned Singapore-based subsidiary Halvorsen Copper Holdings Pte. Ltd (HCH), the Company signed and executed a Share Sale and Purchase Agreement (**Agreement**) with Zambezi Minerals Development Limited (ZMD) to acquire an additional 7.5% interest in the Chilombo Copper Project (Chilombo) in north-western Zambia.

The transaction involved the payment of US\$5,100,000 cash consideration to ZMD and was subject to several conditions precedent, including:

- completion and receipt of a Property Transfer Tax Clearance Certificate issued by the Zambia Revenue Authority;
- ZMD obtaining clearance from the Minerals Regulation Commission (MRC) that MRC consent is not required for the Agreement, or obtaining MRC consent for the transfer of an interest in a mining right pursuant to the relevant MRC Act in relation to the transaction under the Agreement;
- ZMD board and shareholder approval for the transaction under the Agreement; and
- a new Shareholders Agreement being entered into between Halvorsen, ZMD and the holding company of Chilombo, on the same commercial terms as the existing shareholders agreement.

Following completion of the Agreement on 24 March 2026, HCH now holds an 87.5% interest in Chilombo.

Final West Kasakula Assay Results

After the end of the quarter², Halvorsen released all assay results from the diamond drilling programme completed last year at the West Kasakula prospect, which comprised ten (10) drill holes (including one re-entry) for a total of 1,914.3m.

This drilling targeted an approximately 1.2km² zone in the northern portion of the Chilombo licences, located around 30km from a major operating open-pit copper mine. The programme tested an area with limited historical drilling by previous explorers³, and was supported by recent geophysical⁴ and geochemical surveys, together with shallow aircore (AC) drilling⁵, completed during 2024 and 2025.

¹ Refer to HVR ASX release dated 24 July 2025, *New Metallurgical Results from Ongoing Chilombo Testwork*

² Refer to HVR ASX release dated 7 April 2026, *Shallow Copper Sulphide Footprint Grows at West Kasakula*

³ Refer to historical ASX release by a previous explorer (ASX-listed), December 2014, reporting drill intercepts from the West Kasakula area

⁴ Refer to HVR ASX release dated 3 December 2024, *Further Strong Drill Intercepts Returned at Lwele Central*

⁵ Refer to HVR ASX release dated 8 September 2025, *New Shallow Drill Target Defined at Chilombo*

The diamond drilling results have identified two distinct, narrow zones of near-surface, high-grade copper sulphide mineralisation, dipping approximately 12° to the west and remaining open to the west and south.

Structurally, the two mineralised zones intersected may be related as either thrust or bifurcating lodes. This is supported by recent surface geochemical data indicating potential continuity of these zones to the south and west, with elevated Cu/Sc (copper to scandium) ratios well in excess of 2:1, which is typically indicative of copper present as sulphide minerals in the Zambian Copperbelt (Figure 2).

Significant copper drilling intersections returned from this programme included:

- **8.4m @ 0.93% Cu from 51.8m, incl. 6.6m @ 1.11% Cu from 51.8m (KWDD004)**
- **6.3m @ 0.66% Cu from 80.5m, incl. 3.9m @ 0.87% Cu from 82.9m (KWDD009)**
- **5.5m @ 0.42% Cu from 137m (KWDD001)**
- **4.9m @ 0.56% Cu from 82.7m, incl. 2.6m @ 0.93% Cu from 84.9m (KWDD002)**
- **5.3m @ 0.48% Cu from 96.9m and 4.2m @ 0.52% Cu from 52.3m (KWDD005); and**
- **4.5m @ 0.51% Cu from 38.0m (KWDD006)**

All copper assay data will be incorporated into a maiden MRE for West Kasakula, which is expected to be finalised and released later in Q2 2026.

Gold distribution at West Kasakula remains under evaluation, with historical assays returning values of up to 0.21 g/t Au associated with higher-grade copper mineralisation. A targeted re-assaying programme using mineralised intervals from the 2025 drill campaign is underway to further assess the extent of gold distribution at this prospect.

Figure 2: Map of West Kasakula showing highly anomalous Cu/Sc ratio values (outlined) trending south and west of the existing diamond drill holes, indicating copper prospectivity

Forward Strategy

Ongoing metallurgical testwork

The Company continues to advance metallurgical studies aimed at evaluating gold and cobalt recoveries, in addition to copper recoveries, at Chilombo.

A dedicated metallurgical drill hole (SPMT001) completed at the Sampamba deposit has undergone composite sampling of its transitional and fresh mineralisation. Samples have been sent to Core Metallurgy in Brisbane (Australia) for comprehensive testing, with preliminary results expected in May 2026.

Separate gold and cobalt metallurgical composite samples from each of the oxide, transitional and fresh zones at Lwele Central have also been prepared for definitive testwork on metal recoveries.

Phase 3 drilling programme

The Phase 3 2026 drill programme at Chilombo is scheduled to commence in early May. The programme is designed to build on recent exploration success by driving both resource growth and conversion, with a strong focus on regional growth targets across the broader Chilombo licence area.

All copper/cobalt assays from the Phase 2 2025 drilling programme have now been received, along with residual assays from the licence-wide soil geochemical sampling programme completed in September 2025.

This data, together with historical and recently acquired geophysical data⁶, is feeding into ongoing prioritisation of the Phase 3 exploration programme.

In parallel with resource growth at Lwele Central, Phase 3 drilling will systematically evaluate several high-priority regional targets, including Mbalango, Sokoshi, Lwele South and Kalwanyembe. Diamond drilling at regional prospects will be guided by an integrated targeting approach using airborne geophysical data, detailed soil geochemistry, geological mapping and sampling, ground IP surveys and, where appropriate, first-pass AC and/or RC drilling.

Kuiseb Lithium Project (Namibia); 100% HVR

Forward strategy

Exploration activities have ceased, with expenditure pared back to minimum holding commitments.

Halvorsen is pursuing potential commercialisation strategies to unlock Kuiseb's longer-term value, with several NDAs now signed with parties interested in accessing a dedicated Technical Data Room set up for that purpose.

Corporate

Successful equity raising to advance Chilombo

The Placement was conducted at an issue price of A\$0.265 per New Share and was supported by both existing shareholders and new investors, with strong demand received from domestic and offshore institutional and sophisticated investors.

The Placement comprised:

- an unconditional tranche to raise approximately A\$30.9 million through the issue of approximately 116.6 million New Shares, issued under the Company's existing placement capacity under ASX Listing Rules 7.1 and 7.1A; and
- a conditional tranche to raise approximately A\$5.1 million through the issue of approximately 19.2 million New Shares to Summit Crest Holdings Pte Ltd (**Summit Crest**), which participated on a pro-rata basis to maintain its 14.2% shareholding in Halvorsen (**Conditional Tranche**). The Conditional Tranche is subject to shareholder approval at a Halvorsen Extraordinary General Meeting (**EGM**) to be held on 5 May 2026. Settlement and allotment of the New Shares to Summit Crest under the Conditional Tranche is expected to take place shortly after the EGM.

⁶ Refer to HVR ASX release dated 25 November 2025, *Priority Exploration Targets Identified at Chilombo*

Cash balance

Halvorsen finished the quarter with a cash balance of approximately A\$25.3 million (A\$29.3 million including A\$4m held in a 12-month term deposit) and zero debt (excluding typical trade creditors).

Issued capital

The Company confirms it currently has 1,027,615,382 ordinary shares, 36,850,000 unlisted options and 9,420,000 performance rights on issue.

Appendix 5B – Related Party payments

During the Quarter, the Company made payments of A\$214,000 to related parties and their associates. These payments relate to director fees.

About Halvorsen Resources Limited (ASX: HVR, FRA: 3HV)

Halvorsen Resources Limited (ASX: HVR, FRA: 3HV) is an ASX-listed company focused on the exploration and development of battery and electrification metals projects in the broader sub-Saharan African region.

About the Chilombo Copper Project

The Chilombo Copper Project (87.5% Halvorsen) (Chilombo) is situated in the world-class Central African Copperbelt region of north-western Zambia, approximately 70km north-northwest of the town of Kasempa in Kasempa District, North-Western Province. Located on two granted Large Scale Mining Licences (41872-HQ-LML; 41893-HQ-LML), Chilombo covers approximately 329 square kilometres of highly prospective tenure in close proximity to several major mines hosted in similar geological settings.

Halvorsen's Phase 1 drilling during 2024 validated the growth potential of the significant copper mineralisation at Lwele Central and delivered confidence in a potential future large-scale, open-pit mining development at Chilombo.

Extensive Phase 2 drilling was undertaken during 2025. In February 2026, Halvorsen delivered an updated Indicated and Inferred Mineral Resource Estimate for Chilombo of 142.7Mt @ 0.49% Cu (0.54% CuEq) for 696kt contained copper.

Phase 3 drilling is expected to commence early in May 2026.

ILLUSTRATIVE FIGURE – FICTIONAL DATA

Figure 3: Location of the Chilombo Copper Project within the Central African Copperbelt

About Copper

Copper is a soft, ductile metal with a distinctive reddish hue and one of the highest electrical and thermal conductivities of any element. Used by people for more than ten millennia, it is today consumed predominantly in power generation and transmission, building wiring, electronics and industrial machinery. Demand is expected to grow strongly through the energy transition: electric vehicles typically contain three to four times more copper than conventional vehicles, and renewable generation, grid expansion and data centres are all

copper-intensive. Copper is also widely alloyed to produce brass and bronze for plumbing, coinage and architectural uses.

Competent Persons Statements

The information in this announcement that relates to Exploration Targets and Exploration Results is based on information compiled by Mr Graham Keeble, a Competent Person who is a member of The Australasian Institute of Mining and Metallurgy and The South African Institute of Mining and Metallurgy. Mr Keeble is the Company's Consultant Geologist. Mr Keeble has sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr Keeble consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The information in this report that relates to the Chilombo Project Mineral Resources and Exploration Targets is based on information compiled by Michael Treloar, a Competent Person who is a Fellow of The Australasian Institute of Mining and Metallurgy (FAusIMM). Michael Treloar is a full-time consultant with Treloar Resource Geology. Mr Treloar has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Treloar consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

Halvorsen confirms it is not aware of any new information or data which materially affects the information included in the original market announcements. Halvorsen confirms the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcements.

Caution Regarding Forward-Looking Information

This announcement may contain some references to forecasts, estimates, assumptions and other forward-looking statements. Although the Company believes that its expectations, estimates and forecast outcomes are based on reasonable assumptions, it can give no assurance that they will be achieved. They may be affected by a variety of variables and changes in underlying assumptions that are subject to risk factors associated with the nature of the business, which could cause actual results to differ materially from those expressed herein. All references to dollars (\$) and cents in this announcement are in United States currency, unless otherwise stated. Investors should make and rely upon their own enquiries before deciding to acquire or deal in the Company's securities.

Appendix A: Halvorsen Tenement Schedule

As at 31 March 2026, Halvorsen Resources Limited has interests in tenements through the following companies:

- Nkwazi Minerals Limited – Chilombo Project
- Dunmore Exploration (Pty) Ltd – Kuiseb Project

Tenement Type & Number	Tenement Name	Country	Project	Registered Company Name	% Held at End of Quarter	% Acquired During Quarter	% Disposed During Quarter
41872-HQ-LML	Chilombo North	Zambia	Chilombo	Nkwazi Minerals	87.5%	7.5%	0%
41893-HQ-LML	Chilombo South	Zambia	Chilombo	Nkwazi Minerals	87.5%	7.5%	0%
EPL 8127	Kuiseb	Namibia	Kuiseb	Dunmore Exploration	100%	0%	0%

Appendix 2: Formula for Copper Equivalent (CuEq%) calculations

Metal equivalents have been calculated at a copper price of US\$11,200/tonne, gold price of US\$3,400/ounce and cobalt price of US\$38,000/tonne.

Halvorsen Resources has taken a conservative approach to its commodity pricing assumptions and used Canaccord Genuity (CG) commodity price forecasts for copper and cobalt, as stated in its December 2025 commodity price deck (<https://canaccordgenuity.bluematrix.com>), to arrive at the figures used in the CuEq% calculation.

The gold spot price was reviewed (<https://www.kitco.com/charts/gold>) and a conservative long-term gold price was adopted to support the figure used in the CuEq% calculation.

Copper metallurgical recovery is 88% and cobalt metallurgical recovery is 55%, based on metallurgical testwork undertaken by Halvorsen Resources Ltd (refer HVR ASX releases dated 26 May 2025 and 24 July 2025). Gold metallurgical recovery is conservatively estimated at 68%, based on the limited testing completed to date.

The estimated recoveries are consistent with regional benchmarks for similar low-grade copper deposits in Zambia, notably neighbouring operations run by major producers, which mine and process deposits similar to those defined at the Chilombo Project.

Copper equivalent was calculated based on the formula: $\text{CuEq\%} = \text{Cu\%} + (\text{Au grade} \times ((\text{Au Price}/\text{Cu Price}) \times (\text{Au recovery}/\text{Cu recovery}))) + \text{Co grade} \times ((\text{Co price}/\text{Cu price}) \times (\text{Co recovery}/\text{Cu recovery}))$.

In Halvorsen Resources' opinion, the elements included in the copper metal equivalent calculation have reasonable potential to be recovered and sold.

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
