Phase 3 Drilling Underway at Chilombo

[Figure – Photograph: aircore rig and crew drilling on a regional target]

Aircore drilling underway at West Kasakula

HIGHLIGHTS:

- Expanded Phase 3 drilling programme now underway at the Chilombo Copper Project.
- Programme comprises approximately 48 diamond core holes, 36 Reverse Circulation (RC) holes and 280 scout aircore holes, for a total of approximately 22,500m of drilling.
- Key Phase 3 growth focus areas:
 - Lwele 'Hub': extension drilling adjacent to the shallower southern up-dip areas of the Lwele Central deposit and the Lwele West prospect zone, and testing of a geophysical conductor northeast of the Lwele South prospect.
 - Key regional targets: shallow aircore and RC drill testing of large-scale, high-potential regional targets at West Kasakula, Kalwanyembe, Sokoshi, Mbalango and Kafwila, with diamond drill follow-up where warranted.
- Targeting extension of the current Indicated and Inferred Chilombo MRE (142.7 Mt @ 0.49% Cu (0.54% CuEq))¹ and substantial maiden resources in key prospect areas.
- Diamond drilling to be supported by ground-based geophysical IP surveys, including at Mbalango and Kalwanyembe.
- Updated MRE from the Stage 2 drill programme is in the final stages of review.
- Halvorsen is well funded, with cash of approximately A\$29 million (at 31 March 2026).²

Halvorsen Resources Limited (ASX: HVR) (**Halvorsen** or the **Company**) is pleased to announce the start of the Phase 3 drilling programme at its Chilombo Copper Project (**Chilombo**) (HVR 87.5%) in the world-class Zambian Copperbelt.

Halvorsen Managing Director and CEO, Daniel Whitcombe, said:

“After five months of detailed planning, we are very pleased to have rigs turning again at Chilombo as we kick off Phase 3. Following an exceptional 2025, this programme has been built to deliver another substantial step-change in resources, following up the strong regional targets that came through last year at Mbalango, Sokoshi and Kalwanyembe. The project-wide geophysical and geochemical coverage we completed in 2025 has sharpened our targeting considerably, and we go into this phase with a high degree of confidence.

“Step-out and extension drilling at Lwele Central, our flagship deposit, will be a central part of Phase 3, as it continues to show strong potential for further growth.

“The 2026 work also includes ground-based IP surveys over our priority prospects to further refine drill targeting. We will be paying particular attention to the Mbalango and Sokoshi EM conductors, each of which extends for more than 1.8 km of strike and shows a scale, geometry and conductivity comparable to the Lwele Central signature.

“Following the A\$36 million equity raising we recently completed, which was strongly supported by both new and existing shareholders, the Company is fully funded to deliver Phase 3 and the work that follows.”

Chilombo Phase 3 Drilling Underway

Halvorsen is pleased to confirm that drilling has recommenced at Chilombo. The Phase 3 programme comprises approximately 48 diamond boreholes, 36 RC holes and 280 exploratory aircore holes, for a combined total of approximately 22,500 metres of drilling.

The Phase 3 drilling is designed to:

- Extend and upgrade the existing Mineral Resource Estimates (**MRE**) at the Lwele Central and West Kasakula deposits;
- Generate potential maiden Inferred MREs for the Kalwanyembe, Lwele South, Sokoshi and Mbalango prospects; and
- Complete first-pass, shallow aircore and RC exploratory drilling of numerous regional copper anomalies defined across the Chilombo tenure.

The Phase 3 drilling will be supported by ground-based Induced Polarisation (IP) geophysics across several key prospect areas, including Mbalango, Kalwanyembe, Kasonde and Chimbwe.

[Figure 3 – Photograph: diamond drill rig on site at Lwele Central]

Figure 3: Kafue Drilling Services diamond rig on site ahead of Lwele Central MRE extension drilling

The main diamond drilling component of the 2026 Phase 3 programme is being carried out by Kafue Drilling Services (see Figure 3) and Mwila Contracting Limited, who together completed all of the Phase 1–2 diamond drilling at Chilombo during 2024–25.

Kafue Drilling Services has also been engaged for the Phase 3 aircore/RC drilling, which is being completed with a dedicated dual-purpose rig. This allows rapid RC follow-up of encouraging aircore results at key regional prospect areas (see frontispiece).

Part of the diamond drilling has also been designed to provide material for the ongoing, comprehensive metallurgical test work programme (covering copper, cobalt and gold), supporting comminution and flotation test work based on the expected feed ratios of fresh and transitional material across Chilombo. It is also expected to allow initial variability testing.

All current test work programmes have been scheduled with the aim of completing an initial Scoping Study for Chilombo in early 2027.

This release was authorised by Daniel Whitcombe, CEO and Managing Director.

Competent Persons Statements

The information in this announcement that relates to the Exploration Results is based on information compiled by Mr Graham Keeble, a Competent Person who is a member of The Australasian Institute of Mining and Metallurgy and The South African Institute of Mining and Metallurgy. Mr Keeble is the Company's Consultant Geologist. Mr Keeble has sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr Keeble consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The information in this report that relates to the Chilombo Project Mineral Resource and Exploration Target is based on information compiled by Michael Treloar, a Competent Person who is a Fellow of The Australasian Institute of Mining and Metallurgy (FAusIMM). Michael Treloar is a full-time consultant with Treloar Resource Geology. Mr Treloar has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Treloar consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

Caution Regarding Forward-Looking Information

This announcement may contain some references to forecasts, estimates, assumptions and other forward-looking statements. Although the Company believes that its expectations, estimates and forecast outcomes are based on reasonable assumptions, it can give no assurance that they will be achieved. They may be affected by a variety of variables and changes in underlying assumptions that are subject to risk factors associated with the nature of the business, which could cause actual results to differ materially from those expressed herein. All references to dollars (\$) and cents in this announcement are in United States currency, unless otherwise stated. Investors should make and rely upon their own enquiries before deciding to acquire or deal in the Company's securities.

About Halvorsen Resources Limited (ASX: HVR, FRA: 3HV)

Halvorsen Resources Limited (ASX: HVR, FRA: 3HV) is an ASX-listed company focused on the exploration and development of electrification and battery metals mining projects in the broader sub-Saharan African region.

About the Chilombo Copper Project

The Chilombo Copper Project (87.5% Halvorsen) (**Chilombo**) is situated in the world-class Central African Copperbelt region of north-western Zambia. Located on two granted Large Scale Mining Licences (41872-HQ-LML; 41893-HQ-LML), Chilombo covers approximately 329 square kilometres of highly prospective tenure which lies in close proximity to several major mines hosted in similar geological settings.

Halvorsen's Phase 1 drilling during 2024 validated the growth potential of the significant copper mineralisation at Lwele Central and delivered confidence in a potential future large-scale, open pit mining development at Chilombo.

Extensive Phase 2 drilling was undertaken during 2025. In February 2026, Halvorsen delivered an updated Indicated and Inferred Mineral Resource Estimate for Chilombo of 142.7Mt @ 0.49% Cu (0.54% CuEq) for 696kt contained copper.

Phase 3 drilling commenced in May 2026.

About Copper

Copper is a red-orange coloured metallic element in its pure form and is highly conductive to heat and electricity and is physically soft and malleable. Copper has been used for various purposes dating back at least 10,000 years. Today, it is mostly used by the electrical industry to make wires, cables, and other electronic components and is the key component. The metal is widely seen as a green-energy transition material, in part because of the wiring needed for electric cars. EVs can use as much as 80kg of copper, four times the amount typically used in combustion engine vehicles. It is also used as a building material or can be melted with other metals to make coins and jewellery.
